Dolidze, M. V.
THE EMISSION NEBULA IC443= S40, tr. by
P. Kazakov. [1960] 2p. 1 ref. Trans. no. 5069.
Order from LC or SLA mi\$1.80; ph\$1.80 61-15231

Trans. of Astronomicheskii Tsirkulyar (USSR) 1959,
no. 204, p. 13-14.

Spectral observations with a prism camera in the red
indicate that matter, in the form of jets and filaments,
is flowing away from the nebula or is carried away
from it by a stream in two opposite directions. It is
difficult to think that the formation (and the luminosity
mechanism) of the filaments and jets situated near
IC443+S40 and directed from north to south is a result
of the effect of radiation, the ejection of gas from the
stars, or a collision of nebulosities moving in space.
